

Albert Schaber

Collateralized Debt Obligations

First Loss Piece Retention,
Combination Notes, and Tranching

PETER LANG

Table of Contents

List of Figures	10
List of Tables	12
List of Abbreviations	13
List of Symbols	15
1 Introduction	19
1.1 Motivation	19
1.2 Course of examination and main results	22
Bibliography for chapter 1	26
2 Selling the first loss piece in CLOs and the role of reputation . . .	29
2.1 Introduction	29
2.2 The decision to securitize assets	31
2.2.1 Raising funds	32
2.2.2 Risk transfer	33
2.2.3 Arbitrage	37
2.3 Security design from an agency perspective	38
2.3.1 Ex ante asymmetries and adverse selection	39
2.3.2 Ex post asymmetries and moral hazard	42
2.3.3 Implications and critical issues	43
2.4 Two models on asset securitization	44
2.4.1 Model 1: Using CLOs to refinance growth opportunities	44
2.4.1.1 Model setup	44
2.4.1.2 Whole sale vs. securitization	47
2.4.1.3 Repeated securitization	50
2.4.2 Model 2: Using CLOs to manage regulatory capital	56

2.4.2.1	Changes to the model setup	56
2.4.2.2	Whole sale vs. securitization under the Basel I regime	59
2.4.2.3	Whole sale vs. securitization under the Basel II regime	63
2.4.2.4	Repeated securitization under the Basel II regime	65
2.5	Discussion of main results and critical issues	68
2.6	Conclusion	72
	Appendix for chapter 2	74
	Appendix A: Existence of equilibria in the repeated game – model 1	74
	Appendix B: Analysis of the repeated game in the regulatory context – model 2	75
	Appendix B.1: Derivation of the threshold $\tilde{P}$	75
	Appendix B.2: Existence of equilibria in the repeated game – model 2	76
	Bibliography for chapter 2	81
3	Combination notes: Market segmentation and equity transfer . .	87
3.1	Introduction	87
3.2	Derivation of hypotheses on the structuring and impact of com- bination notes	91
3.3	Data description and combination note properties	93
3.3.1	General descriptive statistics	93
3.3.2	Exploring the properties of combination notes	98
3.4	Empirical analysis of combination notes	100
3.4.1	Determinants for the tranching of combination notes . .	100
3.4.1.1	The benchmark case – tranching of plain vanilla tranches	103
3.4.1.2	Tranching of combination notes	105
3.4.1.3	Tranching of combination notes versus the deal	107

3.4.2	Combination notes and risk transfer	111
3.4.2.1	Measuring equity transfer	111
3.4.2.2	Equity transfer and deal characteristics	112
3.4.2.3	Equity transfer and launch spreads	115
3.5	Conclusion	125
	Appendix for chapter 3	127
	Bibliography for chapter 3	128
4	Asset pool quality and tranching of CDOs	133
4.1	Introduction	133
4.2	Literature review	134
4.2.1	Theoretical aspects of tranching	134
4.2.2	Existing empirical evidence on tranching	137
4.3	Derivation of a transaction cost-based hypothesis of the number of differently rated tranches	138
4.4	Empirical analysis of asset pool quality and tranching	146
4.4.1	The dataset	146
4.4.2	Available measures of asset pool quality	149
4.4.3	A simulation of the number of differently rated tranches	152
4.4.4	Empirical findings on the tranching decision	156
4.4.5	Empirical findings on the size of the junior and the se- nior tranche	163
4.5	Robustness of results	167
4.6	Summary of results and discussion	170
4.7	Conclusion	171
	Appendix for chapter 4	173
	Appendix A: Mean-preserving spread of the loss rate distribution	173
	Appendix B: Numerical mapping of ratings	174
	Appendix C: Predicted probabilities for the ordered logit analyses	175
	Bibliography for chapter 4	177
