Acknowledgments

This thesis is the result of my work as a doctoral candidate at the University of Augsburg, School of Business and Economics, Chair of Information Systems and Management, Prof. Dr. Daniel Veit. I hereby want to thank all those who have generously supported me during this journey.

First of all, my deep gratitude goes to Prof. Dr. Daniel Veit for his constructive feedback and professional support throughout my time at his chair.

Secondly, I thank Dr. Rainer Bernnat for his hands-on, motivating, and honest counsel over the last years. Without his support this project would not have been possible.

I also want to express my heartfelt gratitude to Prof. Saonee Sarker and Prof. Suprateek Sarker for the academically insightful and personally enriching experience at the University of Virginia.

I thank my colleagues at the chair for challenging my ideas and sharing their expertise as well as their friendship. Special thanks go to Dr. Philipp Wunderlich, Dr. Jan Huntgeburth, Dr. Manuel Trenz, Dennis Steininger, Sabrina Hauff, Amelie Sach, An Bui, and Seda Alver.

Last but not least, thank you so much to my dear and loving family, my parents Ingo and Lucia, and my brother David. Thank you for believing in me. I know I can always count on you when it matters most!

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Research Questions	4
1.3	Research Approach, Methodology and Design	6
1.3.1	Strategy for Conducting Mixed Method Research	7
1.3.2	Data Analysis	9
1.3.3	Development of Meta-inference	9
1.3.4	Assessment of Meta-inference	10
1.4	Outline	10
2	Contextual Background	15
2.1	A Brief Outline of the Historical Development of eHealth Technologies	15
2.2	Healthcare in Germany	16
2.3	The Reasons for Introducing the ‘eGK’ in Germany	17
2.4	Key Stakeholders in the ‘eGK’ Implementation Project	18
2.4.1	The Health Insurance Companies (Payors)	18
2.4.2	The Doctors (Providers)	19
2.4.3	The ‘Gematik’	19
2.4.4	The Federal Ministry of Health	20
2.4.5	The Federal Office for Information Security and Federal Commissioner for Data Protection and Freedom of Information	20
2.4.6	The Medical Technology Industry	21
2.5	The Technology Behind the ‘eGK’	22
2.6	The Implementation Process of the ‘eGK’ Technology	25
2.6.1	The Implementation Process of the ‘eGK’ Technology Until Today	25

2.6.2	The Implementation Process of the ‘eGK’ Technology as of Today and as Currently Envisioned for the Future	27
2.6.3	Resistance to the ‘eGK’ Technology Implementation Process.	28
2.7	Summary of the Contextual Background.	29
3	Theoretical Foundations	31
3.1	Literature on ‘User Resistance Theory’	31
3.2	Acceptance/Resistance Within eHealth	32
3.3	Isomorphic Forces Within eHealth	37
4	Phase I—Pilot Study	39
4.1	Model Development.	39
4.2	Hypotheses of the ‘Status Quo Bias Model’	40
4.3	Research Methodology	42
4.3.1	Sample, Data Collection Procedure and Measurement of Constructs.	42
4.3.2	Results of Hypothesis Testing	45
4.4	Discussion of Findings	45
5	Phase II—Qualitative Study	47
5.1	Data Collection Procedure.	47
5.2	Analysis of Data	48
5.3	Discussion of Findings	50
6	Phase III—Quantitative Study	55
6.1	Methodology.	55
6.1.1	Structural Equation Modeling	55
6.1.2	Covariance Versus Variance-Based Structural Equation Models.	58
6.2	Model Development.	61
6.3	Hypotheses	62
6.4	Instrument Validation	64
6.4.1	Construct Conceptualization	64
6.4.2	Scale Development	67
6.4.3	Pilot Study	68
6.4.4	Sample and Data Collection Procedure.	68
6.5	Analysis	69
6.5.1	Assessment of Measurement Model	69
6.5.2	Assessment of the Hypothesized Relationships	74
6.6	Discussion of Findings	78

7 Implications and Limitations of the Study	83
7.1 Theoretical Implications	83
7.2 Practical Implications	84
7.3 Limitations of the Study and Suggestions for Further Research.	85
8 Conclusion	87
Appendix	89
References	101

Abbreviations

AVE	Average variance extracted
BfDI	Bundesbeauftragte für den Datenschutz und die Informationsfreiheit (Federal Commissioner for Data Protection and Freedom of Information)
BMG	Bundesministerium für Gesundheit (Federal Ministry of Health)
BSI	Bundesamt für Sicherheit in der Informationstechnik (Federal Office for Information Security)
CR	Composite reliability
DSL	Digital subscriber line
‘eGK’	elektronische Gesundheitskarte (Electronic health card)
‘eGK’ technology	Refers to the whole of the associated technology including the front end installed at the medical practices as well as the backbone
EHR	Electronic health record
EPR	Electronic patient record
‘gematik’	Gesellschaft für Telematikanwendungen der Gesundheitskarte mbh (Society for Telematics Applications)
GDP	Gross domestic product
HBA	Heilberufsausweis (Health professional card)
HIE	Health information exchange
IS	Information system
KVK	Krankenversichertenkarte (Health insurance card)
mHealth	Mobile health
NCRS	NHS care record service
NHS	National health service
QES	Qualifizierte elektronische Signatur (Qualified electronic signature)

SEM	Structural equation model
UFS	Update flag service
UMTS	Universal mobile telecommunications service
VPN	Virtual private network
VSDM	Versichertenstammdatenmanagement (Patient master data)
